Environmental risk assessment of ivermectin: a case study. *Integr Environ Assess Manag* 6(Suppl 1):567–587.

The trigger value of the predicted environmental concentration (PEC) in soil, for intensively reared and pasture animals, was incorrectly published as 100mg/kg dry wt on page 568, under the section ENVIRONMENTAL RISK ASSESSMENT ACCORDING TO VICH (2000, 2004) AND EMEA (2008). The correct value is 100 µg/kg dry wt.
