A Convenient Synthesis of Chiral Amino Acid Derived 3,4-Dihydro-2H-benzol[b][1,4]thiazines and Antibiotic Levofloxacin. — Enantiopure target compounds of type (IV) are efficiently synthesized from o-bromothiophenol and N-protected amino acid derived amino alcohols. The procedure can be applied to a convenient preparation of benzoxazine (V) (no details given), a substructure of the antibiotic levofloxacin. — (PARAI, M. K.; PANDA*, G.; *Tetrahedron Lett.* 50 (2009) 33, 4703-4705; Div. Med. Process Chem., Cent. Drug Res. Inst., Lucknow 226 001, India; Eng.) — Mais
