V 1100 11 - 292 Studies on Propafenone-Type Modulators of Multidrug Resistance. Part 8. Synthesis and Pharmacological Activity of Indanone Analogues. — The propafenone analogues (I) and (II) are synthesized by literature methods and their multidrug resistance is measured. Structure—activity relationship studies reveal a good correlation of activity with lipophilicity. No significant differences are observed between indanones (I) and (II). — (SALEM, M.; RICHTER, E.; HITZLER, M.; CHIBA, P.; ECKER, G.; Sci. Pharm. 66 (1998) 3, 147-158; Inst. Pharm. Chem., Univ. Wien, A-1090 Wien, Austria; EN)
