Key Words: Propafenone; benzothiophene compounds; antiarrhythmic effects

## Summary

Benzothiophene compounds 3a and 3b, structurally similar to propafenone (1), are described.

## Introduction

The pharmacological activity of antiarrhythmic propafenone (Rytmonorm) (1) is due to its blocking of cardiac sodium channels ${ }^{[1]}$. 1 is a flexible molecule. Its rigidization by ring closure to the benzofuran $2 \mathbf{a}$ as well as by the synthesis of the respective benzothiophene 3 a might influence the pattern of pharmacological activity. While Fleischhacker et al. ${ }^{[2]}$ synthesized 2a and 2b, we succeeded in building up the benzothiophene derivatives $\mathbf{3 a}$ and $\mathbf{3 b}$.

## Results and Discussion

Chemical access to the title compounds starts with 2methylbenzothiophene (4) ${ }^{[3]}$, which is acylated to the ketone 5. Reduction of 5 with $\mathrm{NaBH}_{4}$ gives 6 , which is oxidized to the aldehyde 7 by ceric sulfate. After the addition of trimethylsilyl cyanide the protected cyanohydrin 8 is reduced to the substituted aminoethanol 9 by $\mathrm{LiAlH}_{4}$. Acylation of 9 by propionylchloride and reduction of the corresponding carboxamide lead to 3 a , condensation of 9 with acetone and reduction of the imine to $\mathbf{3 b}$ [Scheme 1].

3a and $\mathbf{3 b}$ were studied in guinea-pig isolated papillary muscles and right atria ${ }^{[4]}$; their inotropic, chronotropic, and $\beta$-adrenoceptor-blocking activity were compared with propafenone (1). 3a and $\mathbf{3 b}$ were equally potent as $\mathbf{1}$ in reducing the isometric force of contraction of papillary muscles $\left[\mathrm{EC}_{50}(\mu \mathrm{~mol} / \mathrm{l}): \mathbf{3 a}(4.9) ; \mathbf{3 b}(5.2) ; \mathbf{1}\right.$ (7.5)]. 3b decreased the rate of spontaneous activity of right atria in a similar way as 1 , whereas 3 a showed a more negative chronotropy [ $\mathrm{EC}_{50}$ ( $\mu \mathrm{mol} / \mathrm{l}$ ): 3a (8.8); 3b (16.5); 1 (13.0)]. Contrary to 1, 3a and 3b lacked any $\beta$-adrenoceptor blocking activity ${ }^{[5]}$.
