An Expedient Total Synthesis of cis-(+)-Sertraline from D-Phenylglycine.

— An efficient and practical total synthesis of (+)-sertraline (VI) involving stereoselective intramolecular Friedel–Crafts cyclization (diastereoselectivity: 80%) is described starting from chiral pool D-phenylglycine. — (CHANDRASEKHAR, S.; VENKAT REDDY, M.; *Tetrahedron* 56 (2000) 8, 1111-1114; Indian Inst.
